Related deliverable: D2.5

## A short summary and introduction to deliverable D2.5

In order to stimulate demand, the BUSLeague project designs a qualification for Recognition of Energy Skills since all actors in the value chain need to have a proper, transparent and up-to-date set of knowledge, skills and competences.

In the previous document "Qualification for the recognition of energy efficiency skills<sup>1</sup>" the BUSLeague team working on the qualification for recognition of Energy Skills documented their quest on finding out the right approach, scope, and its contents. It also included an overview of the main tasks defined as part of the Energy Skills qualification.

This document "Recommendations and adapted qualification Report<sup>2</sup>" summarises the stakeholder consultation process carried out in the 6 partner countries in order to validate the results obtained in previous stages. In total 100 stakeholders were consulted during 30 sessions held in the Netherlands, France, Bulgaria, Spain, Ireland, and Austria.

The resulting EE-skills qualification including detailed Unit of Learning Outcomes will be available online in the Unit of Learning Outcomes database of the BUILD UP Skills advisor-app and as Excel file from the BUSLeague website in January 2021.
